

Before checking this doc, if there are any glitches make sure to restart the game page and try again.

v1.4-1.4.5: Problems with the shop cooldown reducer, some unknown problems

- The shop often skips through the 100-200-500 system [fixed]

v1.6-1.7.4: Problems with monke custom switcher

- Names wouldn't register; (forced to use complete names) [fixed]

v1.7.3-1.7.11: Problems with saving, other small known bugs/glitches

- Indexing wouldn't work with spaces in the monkes name after barlines (interfered w/ costume switcher as well. [fixed]
- Inefficient save code writer and reader [fixed]

v1.7.15-1.7.16: No known problems, inefficient controls, fixable problem

- 2 different keys used to activate/deactivate in controls [fixed, more efficient, less controls]
- Secret Monke cannot be saved currently.
- Note: Auto roll is faster than holding space by .2 seconds because of animation latency.

v1.8.0-v1.8.1: Problems w/ saving and "redo" block;

- redo block would often not save all monke's names after each roll [fixed]
- Secret Monke cannot be saved currently.
- save code imports take quite some time when lots of data and monkes need to be recorded* (no complaints yet)

v1.8.1-7: saving issue

- Monke_var didn't save monkes after importing save [fixed]
- Save code has to be copied inside game
- Secret Monke cannot be saved currently

*potential fix: Whenever a monke is received, the "redo" block will make it save an item number of a list corresponding to that monke so instead of having monke names in between each and every bar line it would look like this "2|1|3||". The read save block section will just have to add the item # from "all monkes" to make it possible. This will take some tweaking to read save and redo value blocks but might be worth it when users are complaining.
